

ATEQ Corp. Opens New Sales & Service Office in Silicon Valley, CA

Santa Clara, CA. ATEQ announces the opening of a new Sales & Service Office in Silicon Valley, CA. This office is at 1600 Wyatt Drive, Ste 13, Santa Clara, CA 95054. It will serve as a facility for leak testing sales, service, training and repairs for customers in the western region of the United States.

This office will be managed by Jim Burch, longtime ATEQ West Coast Territory Manager, and Bruno Rousseau, Global Manager of ATEQ TPMS Tools Division. They are joined by Adrian Wang, Field Office Engineer. A Business Development Engineer and Service & Support Technician will soon join the team. The Santa Clara office will serve as the primary sales and service location for new and existing customers in the following states: CA, OR, WA, ID, NV, UT, AZ, NM, CO, MT and WY.

With the addition of this new West Coast facility, ATEQ seeks to improve customer satisfaction by reducing sales lead time and service turnaround time while discovering new potential customers in the area.

“Opening an office on this side of the country became essential when we received large contracts with customers in this area. We wanted to be able to provide them a local service facility and have staff readily available for fast on-site maintenance,” commented Burch.

This location is one of three offices in the United States. The USA headquarters is in Livonia, MI and another new office was also recently established in Chattanooga, TN. ATEQ North America also has an office in Mississauga, Ontario Canada and in Querétaro Mexico. For more detailed information about all of ATEQ's global locations, visit atequsa.com/locations.
