Onsite Standard Calibrations Available

Any organization that performs testing, sampling or calibration and wants reliable test results and consistent processes should have an ISO 17025 accreditation from an ISO accreditation body.

WHO

ISO 17025 accreditation specifies quality management requirements for the competence and consistent operation of laboratories to produce precise and accurate calibration data.

WHAT

ISO Requirements
1. Management: Lab's operation and effectiveness of the quality management system
2. Technical: Staff competence, testing methodology, equipment quality and reporting of test and calibration results

HOW

To ensure the lab's consistent integrity and remain ISO 17025 accredited, accreditation bodies must reassess an organization's documented quality management system every two years.

WHEN

Customers are often required to use ISO 17025 accredited labs. Accreditation can also give labs a competitive advantage and improves their internal operations.

WHY

Accredited ISO 17025 labs exist worldwide. Currently, ATEQ has accredited labs in the following countries: France, USA, Canada, China, Korea, India, Japan, Italy and Spain
