

ONSITE SERVICE

Repairs, Calibrations, Preventative Maintenance

In order to simplify the service process and minimize production downtime, ATEQ offers onsite support. A knowledgeable ATEQ technician can visit the customer's testing site to perform repairs, calibrations or preventative maintenance on ATEQ instruments.

REPAIRS

Over time, normal wear and tear on equipment is inevitable. ATEQ's team can come onsite to troubleshoot and repair your instrument's hardware and software to get your production line back up and running in no time.

CALIBRATIONS

The readings on every measurement testing instrument drift over time. For this reason, it is important to have your ATEQ instruments calibrated annually to ensure accurate measurements. Unlike the competition, ATEQ calibrates the whole leak testing instrument-not just the leak orifice.

Standard and ISO 17025 calibrations are available.

PREVENTATIVE MAINTENANCE

ATEQ can go to the customer's location to analyze their ATEQ instruments and make any adjustments needed to ensure instruments will continue to function optimally.

Preventative maintenance can include:

- Performance Testing of Boards, Sensors, Regulators and Valves
- Valve Rebuilds
- O-Ring Replacements
- Internal Debris Cleaning
- Relubrication
